

Water cutbacks expected

Come hear the options and **give your input**

Workshops

The Carlsbad Municipal Water District, which serves approximately 85 percent of the City of Carlsbad (all but the southeastern most portion), is considering alternatives to managing water supply reduction—one of which is known as water allocation or water rationing. The district will hold two public workshops to explain the options being considered, answer questions and hear feedback.

- **Business Customer Workshop**

Monday, March 9
9:30 to 11:30 a.m.

- **Residential Customer Workshop**

Wednesday, March 11
5:30 to 7:30 p.m.

City of Carlsbad

Faraday Center, 1635 Faraday Ave.,
Room 173B
Carlsbad, CA 92008

Despite a rainy start to 2009, the San Diego region remains in a water supply crisis. That is mostly because of problems hundreds of miles away, where up to 90 percent of our water originates:

- An ongoing drought in the Colorado River basin
- A reduced snow pack and runoff in Northern California
- Environmental problems in the San Francisco Bay-Delta, causing court-ordered pumping restrictions on the State Water Project

Voluntary conservation efforts have helped, but not enough. To make sure we continue to have the water we need, water districts throughout the region are exploring ways to save even more water. Should water supply conditions continue to get worse and water-use restrictions become necessary, the city will explore several different water conservation options—one of which is known as water allocation or water rationing.
